SPEED-DRAWTM CC HOLSTER

DOMINANT ENGAGING

- » Optimized concealment system
- » Concealed Carry Locking Mechanism (CCLM)
- » Innovative and slim design
- » Fast Release Switch (FRS)
- » Multiple belt attachment options available
- » Operationally proven – User endorsed

OPTIMIZED CONCEALMENT SYSTEM

HT Holsters is setting new standards for Concealed Carry by combining ultimate speed of draw with comfort of carry. Ergonomical and slim design together with patented Speed-Draw technology ensures that close body firepower is always available.

THE USE AND PROTECTION

The Speed-Draw CC is made out of very durable fiberglass reinforced polymers and carefully designed to fit the targeted pistol models. Fast Release Switch (FRS) is located and directed so that it provides natural drawing motion and ensures dominant engaging.

The Concealed Carry Locking Mechanism (CCLM) keeps the gun holstered in demanding situations and Closed Trigger Chamber System (CTCS) provides additional user safety by isolating the operating switches of the pistol.

MULTIPLE BELT ATTACHMENT OPTIONS

CC provides several belt attachment options to ensure phenomenal user experience. Officers can use 360° Adjustable Belt Clamp with standard, narrow or HIDE-WIDE options.

The holster does not produce friction between the holster and the gun. This technology is the only way to deliver the performance when required. The Speed-Draw CC enables homeland interceptors to engage first.
